*April 2003*

## **TPED certified sampling cylinders.**

Hoke sampling cylinders, both single and doubled ended, are now offered with TPED1999/36/EC approval in Monel 316 & 304 stainless steel, enabling companies to comply with regulations coming into force in July 2003 that all cylinders falling within the ascribed pressure/volume conditions must be certified.

Of seamless construction and therefore not subject to weld intrusion and subsequent cleaning problems, they are said to be the only TPED approved seamless cylinders on the market available for pressures up to 5000psi.

It is essential for companies to note the end of the two-year transition period put in place when the TPED rule was enacted in 2001.

To assist cylinder transport a complete range of accessories including carrying handles and end caps is offered.

Other Hoke sampling cylinder approvals include UK Health & Safety Executive, USA Department of Transport and Transport Canada.
